DVC240XR and DVR240XR Digital Video Broadcast Modulator & Demodulator

DVC240XR Modulator

DVB Modulator

The DVC240XR is a full featured DVB-S2, DVB-DSNG and DVB-S modulator offered as a circuit card assembly (CCA). It runs at data rates from 1 to 238 Mbps and is capable of CCM, VCM and ACM operation.

Selections are available for both 70/140 MHz and L-Band operation with a separate monitor port. The unit is intended for integration into a customer provided chassis for DSNG, enterprise and interactive services. The .08" x 10" x 12" (254 x 305 x 20 mm) card easily fits into a 1RU chassis and consumes less than 30 Watts.

Integrators and encoder manufacturers find the DVC240XR ideal for applications where a CCA best suits their needs. It permits simple integration of a modulator into a chassis or combining an encoder and modulator into a single unit.

DVR240XR Demodulator

DVB Demodulator

The DVR240XR DVB Broadcast Demodulator Front-End Card is a 45 Msps universal solution for DVB-S DVB-DSNG and DVB-S2 applications in a compact 0.6" x 4" x 6" (160 x 100 x 14 mm) circuit card assembly. The small demodulator single CCA solution provided by the DVR240XR is architected with versatile a Field Programmable Gate Array (FPGA) and ASIC technology.

The frequency range of both dual L-Band inputs, from 950 to 2150 MHz, is compatible with standard commercial low-noise block down converters (LNBs). The unit supports LNB voltage and allows user selection of the L-Band input port with LNB voltage. The DVR240XR demodulates DVB-S, DVB-DSNG or DVB-S2 Constant Coding and Modulation (CCM). The DVB-S2 mode supports Variable Coding and Modulation (VCM) or the most advanced technology Adaptive Coding and Modulation (ACM). Demodulation of standard MPEG transport stream, raw baseband frames, or a generic transport stream is available.
